

Contractor Harness RGHE3

Contractor Harness RGHE1

NEW! RidgeGear Harness

This new harness is designed for a better fit. The first thing you notice about it is the absence of strap ends. Also, the front cross strap does not slide up and down like most harnesses; instead, it is kept in the correct place by O-rings which give a more comfortable fit, and is adjusted at the shoulders. The webbing feels silky as it has a water repellent finish which makes rain bead and roll off, keeping the harness clean and dry, ready for next use. The Ridgegear harness is available with either pass-through slot buckles or quick-connect snap buckles.

- New lightweight durable harness
- New design eliminates front strap ends and plastic keepers. No more straps hanging into your working space
- Front cross strap always sits at proper height on chest. New front O-ring design makes correct fitting certain
- Water repellent webbing means harness is dry for next use even after rain. Oil and grease resistance keeps harness clean
- Rip-stitch indicators show if harness has had a fall so inspection is easier. Inspection log on harness strap
- Fully adjustable. Very comfortable
- Choice of easy slot buckles or quick-connect snaps
- Priced as a compliance harness but has premium features
- Certified to CSA Z259.10 Meets ANSI Z359.1-07

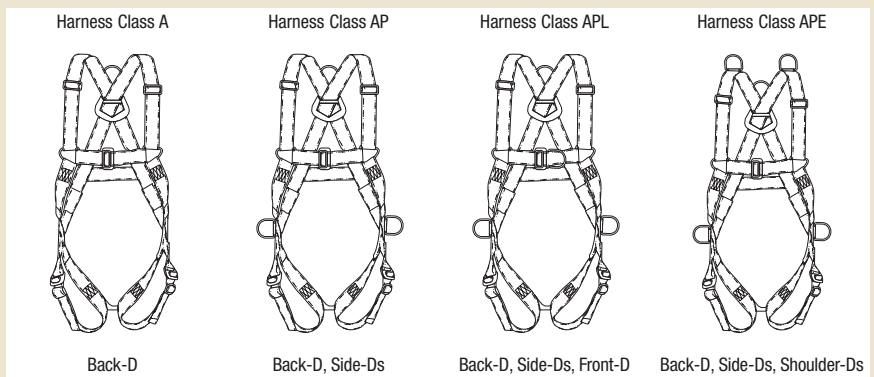

Shoulder D-rings for rescue

Quick Connect Snaps

Upgrade to a Comfort Pad Harness

The RidgeGear Leading Edge Harness with Comfort Pads is a comfortable harness which is easy to put on. Pads help protect the harness and avoid the edge of the webbing and metal parts rubbing against skin, and inside the legs. Comfort pads help ensure that the harness is donned without being twisted or tangled and they keep the back D-ring in the correct place.

- Pre-attached to Leading Edge QC harness
- Makes donning harness as quick and easy as a vest
- Keeps harness sitting on shoulders with D-ring in correct position
- Avoids harness chafing worker's neck or legs
- Includes pads for legs
