

Roofguard Railings

Pre-engineered railing system designed as an effective solution to protect open edges or restricted areas. Built to meet edge barrier code requirements without needing to fasten into the roof. Not limited to standard lengths, Roofguard allows for installation around roof top equipment and obstructions and can join to existing structure such as vertical ladders and ends of runs can be fastened to walls. Galvanized steel, anodized aluminum or custom colours. Send a drawing or dimensions for quote.

Roof Grip Walkway Matting

Used on flat roofs to provide safe access for maintenance personnel and services. Provides a safe designated path for workers to follow. Designed to provide permanent slip resistance in all weathers and temperatures, it is impervious to extreme heat or cold (+60° C through -23°C). Allows drainage, protects roof surface and is tested to lie flat at wind speeds up to 150 km/h. Comes in 33ft rolls, 2', 3' or 4ft wide.
