

Safety Boot Bracket

A plastic moulded bracket which has been tested to exceed required standards even when frozen. Easily shipped and transported due to their light weight and cube shape. An easy way to erect a free standing barrier without relying on surrounding structure.

- Base socket for building a self-supporting perimeter guardrail
- Quick to install on stairways, balconies, open edges, walkways etc.
- Designed to take two 2" x 4" boards for vertical post. Has space for 2" x 4" toe boards
- Lightweight high-polymer plastic moulding is easy to handle and ship
- Non-sharp edges reduces scratches and damages to drywall, stairs etc.
- Exceeds OH&S requirements for guardrail strength
- Ontario engineer approved to OH&S Reg 213.91
- Re-useable, non-rusting, easy to install, saves on lumber and time
- Makes a guardrail independent of framing or drywall so does not interfere with trades
