

NEW! Skywire Self Retracting Lifeline (SRL) 20ft Kevlar Blend Webbing

This new webbing SRL brings efficient safety within the range of every worker at height with its compact design and durable features. Workers who have relied on ropes and rope grabs will find the WR100 retractable an improvement to their efficiency and safety. The WR100 keeps the lifeline to the workers D-ring taut, meaning it does not become a tripping hazard, or form loose loops which can catch and create another risk. The webbing SRL reacts rapidly in a fall.

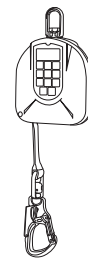

A compact 20ft retractable lifeline with an integral swivel top anchor, swivel snaphook and 3/4" Kevlar Polyester Blend webbing. A smooth-edged glass fibre reinforced nylon housing makes this personal lifeline lightweight, inexpensive and tough. Weighs only 4lbs. Kevlar Polyester blend webbing is resistant to abrasion and wear and avoids the problems of swelling and binding because it does not absorb moisture like ordinary webbings. Has a unique side opening for the webbing. Features a high strength swivel snap hook with a fall indicator.

Certified to CSA Z.259.2.2-98 and ANSI Z.359-2007

Next Safety provides an in-house repair service and all Skywire SRLs are recertified in-house by factory trained technicians, saving you time and money. Next Safety carries all parts for the Skywire SRLs including replacement housings, ferrules and wire rope, thus reducing your cost of ownership and maintenance.

NEW! Skywire Self Retracting Lifeline (SRL) 35ft Steel Cable

The advantage of using a Self Retracting Lifeline is that the line from a worker's D-ring to the anchor is constantly kept tight. The tensioned reel in the SRL allows the worker to move towards or away from the anchor without manually adjusting his lifeline. This means he is not frustrated by a short line, endangered by a loose line, or distracted by continually shortening or lengthening his equipment. In the event of a fall, the SRL locks up on the same principle as a seat belt in a car. The CSA standard says the SRL must lock up and halt the fall of the worker within 1.2 metres of falling, but in practice the modern mechanism of this unit is so effective it will save the worker within a few inches, thus greatly reducing the consequences of a slip or fall. The swivel snaphook ensures the wire is never twisted and has a built-in fall indicator which triggers if a fall occurs, making inspection easy and reliable. The Skywire SRL can be reset and recertified. Has its own foam lined plastic carrying and storage box.

This new Skywire SRL is one of the lightest yet most robust steel cable retractable lifelines on the market today. Working even when frozen, it provides 35ft of galvanized wire rope with a snaphook certified to the new ANSI Z359.1-2007 safety standard for strength. Housed in a glass fibre reinforced nylon housing to absorb shocks, the handle is integral with the frame making it easy to carry. The unique top anchor opening means the unit stays upright when the worker is off at an angle, as opposed to twisting round on its side like most other models. This ensures it delivers and retracts the cable smoothly.

Certified to CSA Z.259.2.2-98 and ANSI Z.359.1-2007
