

Squeeze to open

Concrete Anchor

Removable and reusable anchor for use in concrete, 3,000psi or better. Drill a 5/8" hole for CA-858 (one user in fall arrest) or 1" hole for CA-010 (horizontal lifeline attachment). Press open the spring loaded wedges and insert into hole 3" depth. Release, and the anchor is ready for use. To check strength, use the Anchor Point Tester (below). If used for other applications such as scaffold attachment, an anchor cannot be used again for fall arrest.

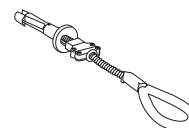

- Removable anchor for concrete
- Installs without tools into drilled or formed hole
- Spring loaded wedges engage anchor within hole
- CA-858 rated for 5,000lbs for 310lb user
- CA-010 rated for 10,000lbs for horizontal lifeline attachment

Anchor Point Tester

New product. Designed to mechanically verify the fastening of the CA-858 concrete anchor. Turns with a wrench and clicks when 5,000lbs load is reached.

- Test strength of anchor fastening without complicated hydraulic instruments
- Use on site to check security of temporary anchors
- Pre-set at 5,000lbs static load as required for fall arrest anchors
- Robust jig needs only a wrench to function
