

Upright Bracket

Our most popular edge barrier bracket, proven over many seasons in flat roofing industry. Vertical post has a support for each horizontal lumber board at the correct height. Contractors like it because it is simple and workers know that they have the complete thing in one component. Space 8ft apart and use 10ft 2" x 4" boards to overlap and create an approved guardrail.

- Fastens on leading edge of flat roofs, parapets and open edges
- Strong, reliable welded post and brackets
- One piece bracket means there are no missing screws or plates
- Holds 2"x 4" boards at pre-set regulation height
- Ontario engineer approved to OH&S Reg 213.91
- Powder coated safety yellow
- Peace of mind about vertical post strength
